**Table F-1**  
**Missouri Consumption of Energy by Source: 1960-2016**  
**Part I — (trillion BTU)**

- <sup>a</sup> Supplemental gaseous fuels (SGF) and fuel ethanol are consumed with natural gas and motor gasoline, respectively. On this table, natural gas excluding SGF and motor gasoline excluding fuel ethanol are presented so that a fossil fuel total can be calculated. *Natural gas including SGF and motor gasoline including fuel ethanol are presented separately for reference.*
- <sup>b</sup> Through 2004, includes kerosene-type and naphtha-type jet fuel. Beginning in 2005, includes kerosene-type jet fuel only; naphtha-type jet fuel is included in "Other Petroleum."
- <sup>c</sup> Liquefied petroleum gases
- <sup>d</sup> Includes asphalt and road oil, aviation gasoline, kerosene, lubricants, and 16 other petroleum products
- <sup>e</sup> Conventional hydroelectric power. Does not include pumped-storage hydroelectricity.
- <sup>f</sup> Wood, wood-derived fuels, and biomass waste. Prior to 2001, includes non-biomass waste.
- <sup>g</sup> Excludes denaturant. Pre-2005 estimates are not comparable to those for later years.
- <sup>h</sup> Losses and co-products from the production of fuel ethanol.
- <sup>i</sup> Solar thermal and photovoltaic energy.
- <sup>j</sup> Net interstate flow of electricity is the difference between the amount of energy in the electricity sold within a State (including associated losses) and the energy input at the electric utilities within the State. A positive number indicates that more electricity (including associated losses) came into the State than went out of the State during the year.

N/A = Not available.

R = Revised data

(s) = Value less than +0.05 and greater than -0.05.

Note: Totals may not equal sum of components due to rounding.
