Table F-2 (continued)
Missouri Consumption of Energy by the Commercial Sector: 1960-2015
Part I — (trillion BTU)

^aNatural gas as it is consumed; includes supplemental gaseous fuels that are commingled with natural gas.

^bLiquefied petroleum gases.

^cBeginning in 1993, includes fuel ethanol blended into motor gasoline.

^dIncludes small amounts of petroleum coke not shown separately.

^eConventional hydroelectric power. For 1960 through 1989, includes pumped-storage hydroelectricity, which cannot be separately identified.

^fThere is a discontinuity in this time series between 1988 and 1989 due to the expanded coverage of renewable energy sources beginning in 1989.

^gWood, wood-derived fuels, and biomass waste. Prior to 2001, includes non-biomass waste.

^hSmall amounts of solar thermal and photovoltaic energy consumed in the commercial sector cannot be separately identified and are included in residential consumption. From 1981 through 1992, includes fuel ethanol blended into motor gasoline that is not included in the motor gasoline column. Beginning in 1980, adjusted for the double-counting of supplemental gaseous fuels, which are included in both natural gas and the other fossil fuels from which they are mostly derived, but should be counted only once in net energy and total.

ⁱIncurred in the generation, transmission, and distribution of electricity plus plant use and unaccounted for electrical system energy losses.

N/A = Not available

R = Revised data

(s) = Physical unit value less than 0.5 or Btu value less than 0.05

Notes: Totals may not equal sum of components due to independent rounding.

The commercial sector includes commercial combined-heat-and-power (CHP) and commercial electricity-only plants.

The continuity of these data series estimates may be affected by changing data sources and estimation methodologies.
